# ENERGY IN BUILDINGS

## EMEA 2024

Europe, the Middle East & Africa

FRIDAY - SATURDAY

NOVEMBER 22-23, 2024

@ 9:00-18:00

### SESSIONS:

- SUSTAINABILITY
- HEALTH & SAFETY
- DECARBONIZATION
- TECHNICAL SOLUTIONS
- DIGITAL ENVIRONMENT
- POLICIES & LEGISLATION
- ENERGY EFFICIENCY FIRST
- RESILIENCE TO CLIMATE CRISIS

# Developing Smart Building Technology Modules to Enhance Workforce Preparedness: A Case for AI-Driven Academic and Professional Education

**This material is based upon work supported by the  
U.S. Department of Energy's Office of Energy Efficiency  
and Renewable Energy (EERE), Building Technologies  
Office (BTO) Award Number DE-EE0009703.**

# Authors

**Prof. Walters**, is Professor of the Practice in the Architectural Engineering (AREN) Program, in the Department of Multidisciplinary Engineering at **Texas A&M University** in College Station, TX and has collaborated in the areas of **competencies for a future-ready workforce, architectural engineering pedagogy and curriculum & instruction**. (Co-author, unable to join today)

**Filza Walters**, Professor of Practice  
Architectural Engineering, Texas A&M University

**Dr. Zhou**, PE, CEM, is Director of Research and Innovation at **Slipstream** with 25+ years of experience in building energy efficiency, focusing on controls, smart buildings, and grid-interactive systems. He is an active ASHRAE member, serving on **TC 1.4, TC 7.5, and SGPC 36**. **Dr. Zhou holds degrees from Zhejiang University, UConn, and Iowa State University**. (PI for project and co-author)

**Xiaohui 'Joe' Zhou**, Director of Research & Innovation  
Slipstream Group, Inc.

**Dr. Shuayto**, is a tenure-track, Assistant Professor of Marketing in the Dickie School of Business at **Ohio Northern University** in Ada, Ohio. She teaches classes in Marketing, conducts research and has presented and published in areas including **professional skills development, and teaching & learning with Artificial Intelligence (AI)**. (Cooperating author)

**Nadia Shuayto**, Assistant Professor of Marketing  
Ohio Northern University

# Outline

- ***Introduction***
- ***Recognized workforce need***
- ***Expected project outcomes***
- ***Primary drivers & team***
- ***Objectives of the project***
- ***Project outcomes***
- ***Course Content***
- ***Conclusions***
- ***Sample examples***
- ***Recognitions***
- ***Resources***

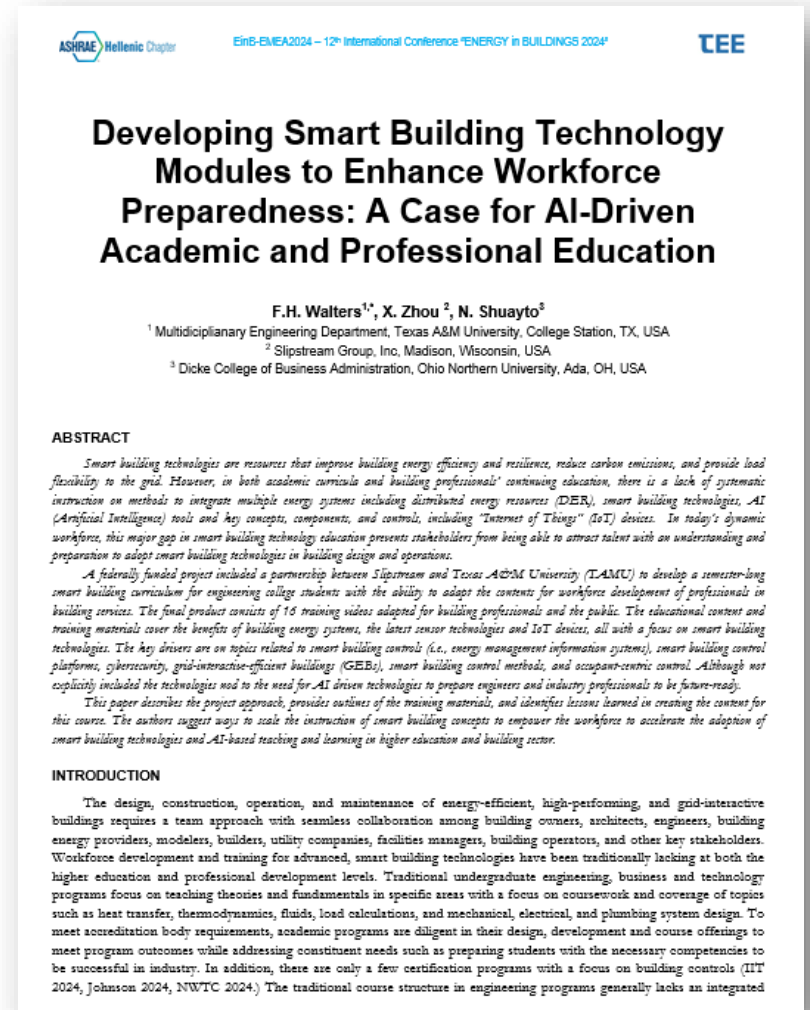

Image: <https://shorturl.at/8xja5>

# Introduction

- Smart building technologies **improve energy efficiency, resilience, reduce carbon emissions**, and **provide grid load flexibility**.
- There is a **lack of systematic curricula** on integrating energy systems, smart building technologies, AI (artificial intelligence) tools, and IoT (internet-of-things) devices in academia and for building professionals.
- This education gap **hinders the ability to attract talent** prepared for smart building adoption in design and operations - fundamental to decarb efforts.
- Through a federally funded grant project, a public-private partnership has **developed smart building curriculum** for **engineering students** and for use in **workforce development** for the building services industry professionals.

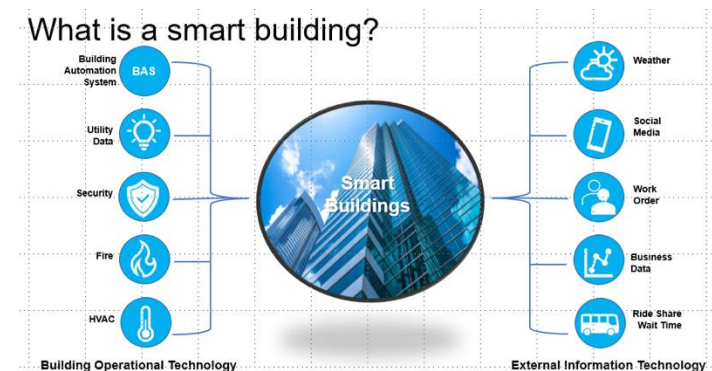

# Recognized need for future-ready workforce

- The course materials *fulfill the need for AI-driven, smart building technologies* necessary to prepare engineering students and professionals for future needs.
- The paper *outlines the project approach, course materials, lessons learned and suggests methods to scale smart building instruction* to accelerate adoption of these technologies in the workforce and for academic curricula in higher education.

# Expected outcomes of project

- The project *resulted in a semester-long*, academic *course consisting of six modules* for engineering undergraduate and graduate students, and *16 training videos* designed, building professionals and the public.
- Training *content covers* benefits of energy systems, sensor technologies, IoT devices, and smart building controls, including:
  - *Energy management information systems (EMIS)*
  - *Smart building control platforms*
  - *Cybersecurity*
  - *Grid-interactive-efficient buildings (GEBs)*
  - *Occupant-centric control*

# Primary drivers & collaborators

- Federal agency *funded research project* as awarded grant
- Aimed for *broad dissemination* and knowledge sharing
- *Collaborative*, team effort, engaged multiple stakeholders
- Strategized, developed, *and* validated course content
- Provided *innovative & iterative curriculum* design
- Indented to fill *smart building competency gaps*
- Designed for traditional *engineering programs*
- Dissemination to include *public* with interest in buildings
- Provide *lifelong learning for building professionals*

Image: <https://shorturl.at/6LY5v>

# Objectives for course development

- Develop & validate a set of **module-based**, course materials
- **Market-ready** for adoption by institutes of higher learning - globally
- **Packaged, scalable**, smart building technologies for professors
- Develop **online training videos** suitable for building professionals
- **Disseminate** project information and resource to target audiences
- **Build knowledge**, continuing education, lifelong learning opportunity
- Promote **broader impact** through partners & professional organizations

# Summary of project outcomes

- Team's charge was to develop a semester-long course<sup>1</sup>, ***new smart building course*** - suitable for any engineering college curricula
- Content to be packaged in ***adaptable*** & easy to follow modules
- Produce a series of 16 training ***videos***<sup>2</sup> for customized & self-paced learning
- Final product is to be available ***free*** to universities, professionals and public
- Topics are to cover ***smart building technologies including AI***
- Content should provide ***industry trends and smart building benefits*** including building systems, sensors & IoT devices, advanced building monitoring & controls, smart building control platform, and case studies

# <sup>1</sup>Modules for academic semester (15-week) course:

MODULE #	MODULE TITLE
0	Introduction of the Course
1	Fundamentals of Building Mechanical and Energy Systems, and Building System Integration
2	Smart Building Technologies Drivers and Trends
3	Fundamentals of Smart Building Technologies
4	Advanced — Building Energy Management and Controls
5	Applications of Engineering Tools and Standards—Building Operation
6	Smart Building Technologies Case Studies for Design and Operation

# 2 Online sessions consisting of 16 training videos for building industry professionals:

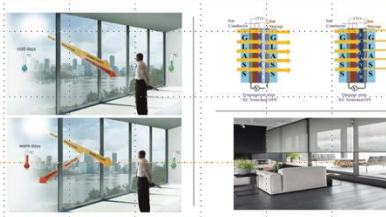

SESSION #	TOPIC CATEGORY	TOPIC
1	Introduction	Introduction to Smart Building Technologies
2	Building Systems	Building HVAC—Basic Systems
3		Building HVAC—Complex Systems
4		Networked Lighting Controls and HVAC Integration
5		Solar PV, BESS, and EV Charging
6		Smart Window, Automated Shades, Phase Change Materials, and Plug Loads
7	Sensors and IOT Devices	Sensors
8		IOT Devices
9	Smart Building Controls	Advanced Building Monitoring and Controls
10		Smart Building Control Platform
11		Smart Building Control Platform Cybersecurity
12		Smart Building Control Methods
13		Occupant-centric Control
14	Smart Building Applications	Grid-interactive Efficient Buildings and Connected Communities
15		Review of Whole-building Simulation Programs
16		Smart Building Application Examples

# Conclusions and lessons learned for future work

- Smart building technologies are not adequately covered in *higher education*
- The team utilized best practices in *developing & testing* curriculum for training
- Project's *learning modules* are systematically organized for scaffolded learning
- *Lessons learned* in course/content development:
  - 1) Involve project advisors early to review course outlines including topics covered
  - 2) Multiple rounds of internal and external technical expert reviews take time
  - 3) Collaborate with a learning management system provider
  - 4) Structure course content and delivery with focus on learning effectiveness & assessment
- Training materials will be available for *free* dissemination by the end of 2024

# Example of PPT Slides for Academic Course

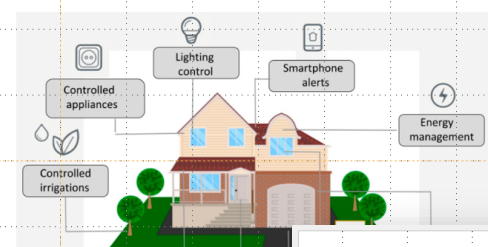

## Summary: Introduction of Smart Envelope

- Smart windows:** include thermochromic window, electrically activated switchable window, automatic shading
- PCMs in buildings:** include passive and active PCMs

53

## Internet of Things (IoT) Sensors

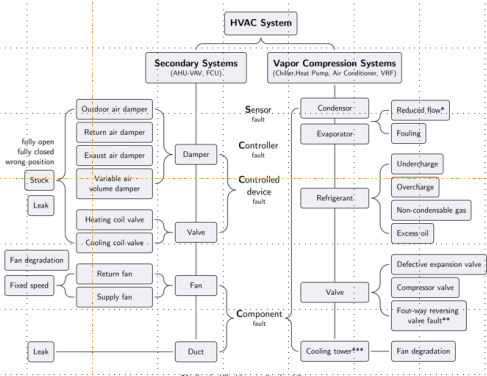

- Smart devices with advanced communication
- Provide implicit and non-direct occupancy presence and comfort detection
- Occupant feedback enabling energy saving and improved comfort

44

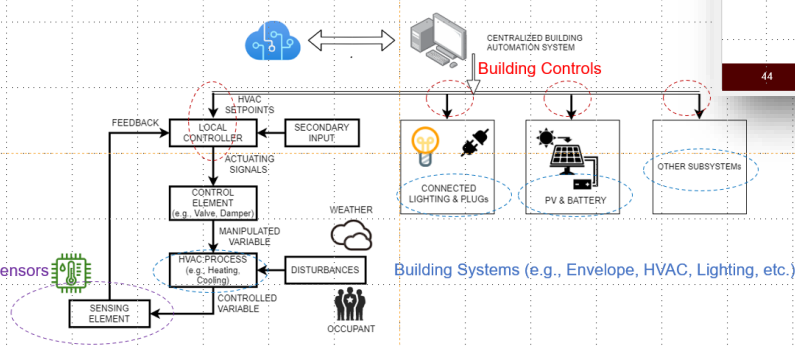

## What is automatic fault detection and diagnostics

- Fault classification of HVAC systems [1].

111 E

## Smart Building Elements

Adopted from Honeywell Engineering Manual of Automatic Control for Commercial Buildings

4

## Building-to-Grid Integration: Example 1 (3)

### Mathematical Expression – Objective Function

1. Objective function

Objective function is to minimizing the operation cost in the coming 24 hours.

$$\min J = \min \left( \sum_{t=1}^N c_p^s(t) p^s(t) + c_p^d \max(p^s(t)) \right)$$

Electricity consumption Demand charge

Where  $c_p^s(t)$  — power price at time  $t$ ;  
 $p^s(t)$  — power supply from grid at time  $t$ ;  
 $c_p^d$  — demand charge rate;

Constraints: Power balance, cooling balance, battery state of charge (SOC) dynamics, TES dynamics, etc.

111 E

## Benefits of Smart Buildings

### Energy and Resilience

- Significant energy and cost savings through smart building design and operations
- Improved grid resilience by providing grid services through Grid-interactive Efficient Buildings (GEBs)
- Improved building energy resilience through DER integration and microgrid

Mod: Introduction to Smart Building Tech... Course Post Test

Answer the following questions to the best of your ability. ALL questions must have an answer selected before the test can be graded. To save your test and come back at a later time, click the **Save Test** button at the bottom of the page. Once saved, you may browse to another study page or you may close the window. To submit the test for grading, click the **Submit Test for Review** button at the bottom of the page.

1. What is a smart building?
  - a. A building that can enhance occupant comfort
  - b. A building that can improve energy efficiency
  - c. A building that can leverage various interconnected devices
  - d. There is no authoritative, consensus definition in the building industry
2. Smart building elements include:
  - a. Building systems
  - b. Sensors, controls, and networks
  - c. Occupants
  - d. All of the above
3. What are the benefits of smart buildings?
  - a. Improve well-being of occupants
  - b. Improve building energy resilience
  - c. Reduce carbon emissions
  - d. All of the above

# Acknowledgements

- Thank you, *Hellenic Chapter* for this opportunity to disseminate our work
- Thanks, *ASHRAE Society* and *all attendees* for your interest
- Thank you to our *partners and funders* for your support
- Thank you, Prof. Emerita *Janice K. Means*, P.E. FESD, FASHRAE for presenting our work
